

My XM Satellite Radio is also an AM/FM Radio. I can pick up all the local broadcast stations as well as XM Satellite Radio. I choose to listen to XM for traffic and weather for my area (Philadelphia) because it's there when I need it. If the broadcasters want me to listen to an AM or FM radio station for this information, they will have to do a better job of providing it. It's not a matter of restraint of trade. It's a matter of competing for listeners.
